

Creating PDFs from Quark 7.3

The best way to make a PDF out of Quark is to export it.

Under the menu: Edit/Output Styles...

Create a PDF output that matches the following or import the attached setting.

If you are going to import just click on the import button and find the file you saved from the link in the email.

Or if you prefer or that does not work follow the Screen snapshots of the setting that are important on this sheet. Note: If there is no snapshot then leave that tab blank or unchecked.

Under the menu: File/Export/Layout as PDF
